

Fazal Abbas

Software Engineering Student | Frontend Developer

fazalabbas2002@gmail.com | +92 370 1274689 | Karachi, Pakistan

GitHub | LinkedIn | Portfolio

Professional Summary

Software Engineering student from Karachi with 20+ web applications built including a browser-based operating system, algorithm visualizers, Canvas simulations, Firebase applications, and civic tech tools. Skilled in HTML5, CSS3, JavaScript, Bootstrap 5, jQuery, Firebase Auth, Firestore, Canvas API, Web Audio API, and responsive design. Currently completing multiple frontend internships simultaneously.

Technical Skills

Frontend: HTML5, CSS3, JavaScript (Vanilla), Bootstrap 5, jQuery, Responsive Design, CSS Grid, Flexbox, Mobile-First Design, CSS Animations

Browser APIs: Canvas API, Web Audio API, Fetch API, localStorage, IntersectionObserver, requestAnimationFrame, Clipboard API, Vibration API

Cloud & Deployment: Firebase Authentication, Firestore, Firebase Hosting, GitHub Pages

Programming Fundamentals: OOP, Data Structures, Algorithms, VB.NET, Python (basic)

Tools: VS Code, Git, GitHub, Chrome DevTools, PowerShell

Career Highlights

- Built and deployed 20+ projects across frontend development, browser APIs, and interactive systems.
- Built a browser OS with 10+ modules including a window manager, draggable apps, Canvas wallpapers, terminal, notes, weather, themes, and local persistence.
- Completed 4 simultaneous frontend internships while maintaining active GitHub repositories, live demos, and project submissions.
- Strong VB.NET and DSA background covering Stack, Queue, Linked List, BST, Binary Search, Bubble Sort, OOP, and recursion.

Internship Experience

Frontend Development Intern - DecodeLabs (2026)

- Completing Static Webpage Design and Responsive Layout projects.
- Applying semantic HTML, CSS Grid, Flexbox, media queries, and mobile-first design principles.

Frontend Development Intern - CodeAlpha (2026)

- Building Calculator, Portfolio, Music Player, and Image Gallery projects.
- Implementing responsive UI layouts and interactive JavaScript features.

Frontend Development Intern - HexSoftwares (2026)

- Completing Personal Portfolio, To-Do List, and HTML-only Resume Website projects.
- Applying HTML, CSS, and JavaScript fundamentals through assigned weekly tasks.

Frontend Development Intern - NexSoft (2026)

- Completed assigned frontend development projects.
- Applied responsive design and component-based UI patterns.

Featured Projects

NIGHTCITY // OPERATING SYSTEM

- Built a browser-based OS with a window manager, draggable applications, desktop icons, taskbar clock, app launcher, and local persistence.
- Created 10+ integrated modules including terminal, notes, weather, settings, notifications, themes, Canvas wallpapers, and Web Audio visualizer.

Stack: HTML, CSS, JavaScript, Canvas API, Web Audio API, localStorage

Physics Playground

- Built an interactive physics simulation with gravity, springs, soft-body inspired behavior, object collisions, velocity visualization, and real-time Canvas rendering.
- Used object-oriented JavaScript architecture for vectors, bodies, physics engine, renderer, and app-level controls.

Stack: HTML, CSS, JavaScript, Canvas API

Visual Query Builder

- Created a visual schema modeling tool with table nodes, relationship mapping, SQL query generation, validation warnings, and import/export workflow.
- Designed complex UI state management in Vanilla JavaScript without using a frontend framework.

Stack: HTML, CSS, Vanilla JavaScript

Visual Algorithm Studio

- Built real-time visualizations for Bubble Sort, BFS, BST, Stack, Queue, and Linked List operations with step-based controls.
- Connected academic data structures knowledge with browser-based visual learning tools using Canvas rendering.

Stack: HTML, CSS, JavaScript, Canvas API

Firebase Habit Tracker

- Developed a CRUD habit tracker with user authentication, streak tracking, weekly progress, Firestore persistence, and responsive dashboard UI.
- Implemented cloud-backed user data storage using Firebase Authentication, Firestore, and GitHub/Firebase deployment workflows.

Stack: HTML, CSS, JavaScript, Firebase Authentication, Firestore

Karachi Transit Tracker

- Built a Karachi-focused civic-tech transit map with route planning, timetable UI, weather integration, station data, and map layers.
- Used public mapping and weather APIs to create a practical frontend application for local transport context.

Stack: HTML, CSS, JavaScript, Bootstrap, Leaflet.js, Overpass API, Open-Meteo

Education

Aptech Computer Education - Software Engineering (In Progress)

Beaconhouse School System - Matriculation
